Program 8) WaP to create a list of only the even integers appearing in the input list(may have elements of other types) using for loop and list comprehension.

code=

```
def cubes():
  newlist= []
  number = [1,2,3,4,5,6,"seven"]

  for i in number:
    if type(i)== int:

      if i % 2 == 0:
        newlist.append(i**3)
  print(newlist)
cubes()
```

output=
[8, 64, 216]
