Program 6. WAP to swap the first n characters of two strings.

Code =
```
str1 = input("enter first string: ")
str2 = input("enter second string: ")
n1 = int(input("enter no of character which is to be swap: "))
n = str1[ :n1]
m = str2[ :n1]
if n1 <= min(len(str1),len(str2)):
  print(str1.replace(n,m))
else:
    print(str2.replace(m,n))
```

Output =
enter first string: hello python
enter second string: welcome to new world
enter no of character which is to be swap: 10
welcome toon

enter first string: hello python
enter second string: welcome to new world
enter no of character which is to be swap: 15
hello pythonworld
